1 Introduction

1.1 Purpose

This package is intended to serve somewhat the same purpose as the very (deservedly!) popular package **Rcpp**.

1.2 License

The **SEXPtrools** package is licensed under the very permissive 2-clause BSD license, commonly referred to as the FreeBSD license.

1.3 Installation

2 Package Use

3 Q&A

Why make this?

How does this differ from Rcpp?

Why would I want to use it?
